SUMMARY

Product Owner and Business Analyst specializing in SAP S/4HANA, enterprise ERP systems, and data-driven decision-making for manufacturing, supply chain, and financial costing. Led a cross-functional reconciliation initiative at Tyson Foods that reduced ERP data discrepancies by 95% across 30+ plants, directly supporting annual financial close and mitigating compliance risk. Owned the enterprise BOM Portal managing 700K+ Bills of Material underpinning multimillion-dollar production and financial reporting. Currently consulting for enterprise and mid-market clients. Cornell-certified in Product Management.

SKILLS

Product & Agile: Product Ownership, Business Analysis, Agile/Scrum, SAFe, Kanban, Sprint Planning, Backlog Prioritization (MoSCoW), Product Roadmapping, User Story Mapping, Acceptance Criteria, Requirements Gathering, Stakeholder Management, Change Management, Process Improvement, UAT, SDLC

Data & Systems: SAP S/4HANA, BOM Management, ERP Integrations, Data Governance, Data Reconciliation, Data Migration, ETL, MySQL, SQL Server, GCP BigQuery, Power BI, KPI Reporting, Business Process Mapping, Root Cause Analysis, Gap Analysis

AI & Automation: Prompt Engineering, AI-Assisted Documentation, Generative AI for Requirements & Analysis, Claude, Cursor, OCR / Data Extraction, Microsoft Copilot, AI Prototyping

Tools: Jira, Azure DevOps, HP ALM, ServiceNow, SharePoint, Figma, Microsoft 365, Python, C#, SQL

EXPERIENCE

Freelance IT & Product Consultant

December 2025 – Present

Independent (Field Nation / Contract)

- Re-engaged by Tyson Foods as a contract IT Support Technician, providing on-site technical support and systems administration across enterprise environments.
- Continuing enterprise IT infrastructure deployments through Field Nation for national retail, healthcare, and enterprise clients, maintaining a 98%+ first-time completion rate across 90+ cumulative projects.
- Building an AI-powered product portfolio applying prompt engineering, Claude, Cursor, and data analysis to real-world business and product analysis use cases.

IT Product Owner (Promoted from Analyst Applications)

August 2024 – November 2025

Tyson Foods

Promoted from Analyst Applications to Product Owner within 6 months. Owned product delivery for enterprise SAP integrations and data reconciliation initiatives in an Agile/Scrum environment, partnering with Directors of Operations, Finance, and Supply Chain.

Product Owner (January 2025 – November 2025)

- Led cross-functional data reconciliation initiative between SAP S/4HANA and MySQL, reducing ERP discrepancies by 95% across 30+ manufacturing plants — delivering audit-ready reporting via GCP BigQuery and Power BI that directly supported annual financial close and eliminated compliance risk flagged by internal audit.
- Owned the enterprise BOM Portal (700K+ Bills of Material, 30+ plants), serving as the single source of truth for production costing, scheduling, and financial reporting — coordinating with finance, operations, and engineering stakeholders to maintain data integrity across the full product lifecycle.
- Prioritized backlog items across competing requests from finance, operations, and engineering using MoSCoW prioritization — balancing audit compliance deadlines against production system enhancements to deliver the reconciliation initiative on schedule without disrupting active sprint commitments.
- Facilitated backlog grooming and sprint planning in Jira, clarifying acceptance criteria and aligning cross-functional teams of developers, analysts, and business stakeholders — improving sprint completion rates by 20% and reducing scope churn.

- Designed and implemented AI-assisted documentation workflows using prompt engineering and OCR-based data extraction, reducing requirements gathering cycle time by 30% and eliminating manual handoff errors between business and engineering teams.

Analyst Applications (August 2024 – January 2025)

- Performed data validation and reconciliation between SAP S/4HANA, MySQL, and internal applications, surfacing material and specification mismatches that informed the enterprise-wide reconciliation initiative.
- Gathered and refined business requirements through stakeholder interviews with operations directors and plant managers, translating operational needs into documented enhancements aligned with sprint delivery cycles.
- Conducted gap analysis and root cause analysis across business application workflows, identifying process inefficiencies and recommending system enhancements that improved data governance practices.

EARLIER CAREER

IT Field Technician (Freelance) — Field Nation

March 2022 – August 2024

- Completed 80+ IT infrastructure deployments across 25+ sites with 98% first-time success rate for national retail, healthcare, and enterprise clients. Concurrent with undergraduate degree.

IT Support Specialist — Shine Solar

June 2021 – March 2022

- Supported 300+ employees, resolving 150+ help desk tickets monthly at >95% SLA compliance. Authored company's first IT policies manual, reducing repeat incidents by 25%.
